JUAN ANDRÉS GUERRA

Software Engineer

Buenos Aires, Argentina

juanguerracuenta@gmail.com | LinkedIn | GitHub | juanpato.github.io

SUMMARY

Backend developer with 6+ years building and maintaining production .NET systems, most of it on enterprise applications in regulated domains: insurance, banking and academic publishing. Used to owning a feature end to end, from the database up to the screen, and to remote work in distributed teams.

EXPERIENCE

Software Developer Jan 2024 – Present

Talios Factory Tech | Remote

- Full stack work on the content platform of a US scientific publishing company, on both the .NET backend and the frontend, in English with the client team every day.

Software Developer Jan 2022 – Jul 2024

Nybble Group | Remote

- Built and maintained insurance applications for a US pet insurance provider, using .NET, ASP.NET Core, SQL Server and Angular, in a team of 7.
- Implemented Azure Functions (HTTP triggers) to process Stripe webhook events, making payment handling idempotent so a repeated webhook never charges a customer twice.
- Managed deployments across multiple environments with Azure DevOps pipelines (CI/CD).
- Investigated and resolved production incidents, keeping downtime to a minimum.

Backend Developer Sep 2021 – Dec 2021

Snoop Consulting | Remote

- Migrated microservices from Java to .NET Core in a banking environment, in a team of 6.
- Developed and maintained backend services with .NET Core, Oracle and Entity Framework.

Full Stack Developer Mar 2020 – Aug 2021

Ar-Tech

- Built backend systems with .NET Core and SQL Server for order management and sales forecasting platforms.
- Built multi format invoice processing, parsing both PDFs and images.

PROJECTS

Verde Mercado verdemercado.com.ar

- Organic food e-commerce built end to end with ASP.NET Core 6, EF Core and SQL Server: Google OAuth sign in, shipping cost by distance through the Google Maps API, images on Azure Blob Storage and admin reports exported to Excel.
- Packaged with a multi stage Dockerfile and deployed to Render, secrets injected as environment variables and Data Protection keys persisted so sessions survive a container restart. Covered by 119 xUnit tests using Moq and an in memory EF context.

Futbolero futbolero.ar

- Web app plus native iOS and Android apps to organise football matches between friends, built with TypeScript, React, React Native (Expo) and Node.js.

TECHNICAL SKILLS

Backend: C#, .NET 6, .NET Core, .NET Framework, ASP.NET Core, MVC, Entity Framework Core, LINQ, REST APIs

Testing: xUnit, Moq, FluentAssertions, integration tests with an in memory EF context

Cloud & DevOps: Docker, Azure DevOps (CI/CD), Azure Functions, Azure Blob Storage

Databases: SQL Server, Oracle

Frontend: Angular, React, React Native, Razor, Blazor

Tools: Git, Scrum, Agile

Languages: Spanish (native). English (fluent, B2), used at work every day for the last 4 years.

EDUCATION

Ingeniería en Informática 2023

Universidad Nacional de La Matanza
