JUAN ANDRÉS GUERRA

.NET Developer

Buenos Aires, Argentina

juanguerracuenta@gmail.com | LinkedIn | GitHub | juanpato.github.io

SUMMARY

.NET backend developer with 5 years of experience building production applications for US clients in insurance, banking and academic publishing. I work mainly with C#, ASP.NET, Entity Framework and SQL Server, and contribute on the frontend when needed. Used to working remotely, in English, with distributed teams.

EXPERIENCE

Software Developer Jan 2024 – Present

Talios Factory Tech | Remote

- Full stack development on the content platform of a US scientific publishing company, working in English with the client team every day.
- Maintain and add features to a large legacy .NET application (ASP.NET MVC, Web API, WebForms) written in C# and VB.NET, on SQL Server with Entity Framework and Dapper.
- Take part in the migration from .NET Framework to .NET 8, using AI-assisted development tools (Cursor, Claude Code) daily.

Software Developer Jan 2022 – Jul 2024

Nybble Group | Remote

- Built and maintained insurance applications for a US pet insurance provider, using .NET, ASP.NET Core, SQL Server and Angular, in a team of 7.
- Implemented Azure Functions (HTTP triggers) to process Stripe webhook events, making payment handling idempotent so a repeated webhook never charges a customer twice.
- Managed deployments across multiple environments with Azure DevOps pipelines (CI/CD).
- Investigated and resolved production incidents, keeping downtime to a minimum.

Backend Developer Sep 2021 – Dec 2021

Snoop Consulting | Remote

- Migrated microservices from Java to .NET Core in a banking environment, in a team of 6.
- Developed and maintained backend services with .NET Core, Oracle and Entity Framework.

PROJECTS

Verde Mercado verdemercado.com.ar

- Organic food e-commerce built end to end with ASP.NET Core 6, EF Core and SQL Server: Google OAuth sign in, shipping cost by distance through the Google Maps API, images on Azure Blob Storage and admin reports exported to Excel.
- Packaged with a multi stage Dockerfile and deployed to Render, secrets injected as environment variables and Data Protection keys persisted so sessions survive a container restart. Covered by 119 xUnit tests using Moq and an in memory EF context.

Futbolero futbolero.ar

- Web app plus native iOS and Android apps to organise football matches between friends, built with another developer using TypeScript, React, React Native (Expo) and Node.js.

TECHNICAL SKILLS

Backend: C#, VB.NET, .NET 8, .NET 6, .NET Framework, ASP.NET Core, ASP.NET MVC, Web API, WebForms, Entity Framework, Dapper, LINQ, REST APIs

Testing: xUnit, NUnit, Moq, FluentAssertions, integration tests with an in memory EF context

Cloud & DevOps: Docker, Azure DevOps (CI/CD), Jenkins, Azure Functions, Azure Blob Storage

Databases: SQL Server, Oracle

Frontend: Angular, React, React Native, Razor, Blazor

Tools: Git, Scrum, Agile, AI tools (Cursor, Claude Code)

Languages: Spanish (native). English (fluent, B2), used at work every day for the last 4 years.

EDUCATION

Ingeniería en Informática 2023

Universidad Nacional de La Matanza
